

Delta Table with Existing data in Databricks

Submitted By: Aniroop Gupta
DE Batch 1

Step 1. Writing data in Delta format

▶ ✓ 4 minutes ago (6s) 1

```
from pyspark.sql import SparkSession

spark = SparkSession.builder.appName("Dlt example").getOrCreate()

# Reading source file using the Delta format and writing to the destination path in Delta format
spark.read.format("delta").load("dbfs:/user/hive/warehouse/export").write.format("delta").mode("overwrite").save("/FileStore/tables/delta_train/")
```

▶ (7) Spark Jobs

▶ ✓ 4 minutes ago (1s) 2

```
#Below we are listing the data in destination path
display(dbutils.fs.ls("/FileStore/tables/delta_train/"))
```

▶ (2) Spark Jobs

Table ▼ +

🔍 🏠

	path	name
1	dbfs:/FileStore/tables/delta_train/_delta_log/	_delta_log/
2	dbfs:/FileStore/tables/delta_train/part-00000-6ad2e66f-b2fb-476a-8963-3b51f40c3365-c000.snappy.parquet	part-00000-6ad2e66f-b2fb-476a-8963-3b51f40c3365-c000.snappy.parqu...

Step 2: Databricks Create Delta table From Dataframe:

```
4 minutes ago (3s) 3

# Create database if it doesn't exist
spark.sql("CREATE DATABASE IF NOT EXISTS delta_training")

# DDL query to create table using Delta format
ddl_query = """CREATE TABLE IF NOT EXISTS delta_training.emp_file
              USING DELTA
              LOCATION '/FileStore/tables/delta_train/' """

# Execute the query to create the table
spark.sql(ddl_query)
```

DataFrame[]

```
3 minutes ago (<1s) 4

# Listing tables in the delta_training database
spark.catalog.listTables("delta_training")
```

(2) Spark Jobs

```
[Table(name='emp_file', catalog='spark_catalog', namespace=['delta_training'], description=None, tableType='EXTERNAL', isTemporary=False)]
```

Step 3: Visualize data in delta table:

3 minutes ago (1s) 5 Python

```
spark.sql("select * from delta_training.emp_file").show(truncate=False)
```

(2) Spark Jobs
